

## Clairvoyix Server Hosting – Security and Performance

The Clairvoyix-deployed servers and related hardware are housed in a state-of-the-art colocation facility operated by the nationally recognized Zayo Group. The facility is a carrier-neutral operator, and offers a rich ecosystem of connections to Cloud, IP, financial/low latency, video content, carrier and peering ecosystems. The facility reaches 1,225 networks via direct connection across 20 national, inter-connect focused colocation facilities. The facility also extends beyond its colocation footprint to reach more than 9,000+ on-net buildings across a 4,629,000+ mile fiber network. The facility in which our servers and related hardware resides is comprised of:

- 28,000 square feet of data center space
- Private cages and cabinets
- Carrier-neutral connectivity to six carriers
- Diverse fiber entrances
- Connectivity to a 4,629,000-mile fiber network and more than 9,000 on-net buildings
- Remote hands for on-site assistance

The Clairvoyix hosting facility meets our customers' requirements for high availability and industry standard security:

- Facility substation also serves McCarran International Airport
- N+1 facility design (cooling, UPS)
- 2,000 kW diesel generator with a 3,000-gallon fuel tank
- Smoke detection and pre-action sprinklers
- SLAs supported by geographically diverse NOCs
- SOC1/SSAE16 Type II Certified
- Keycard access, mantrap access and biometric palm scanners
- 24x7 site monitoring and security
